Io

A paper globe, 82 mm across: a scale of 1 : 44.4 million. The Earth at this scale would be 29 cm across.

See Io turn in the live 3D map:
www.spaceradar.ai/#at=io

How to make it

1. Print at actual size on thick paper (160 to 200 g/m2), or glue the print to thin card. 2. Cut round the outside line, tabs and all. Do not cut along the equator: the gores stay joined there. 3. Fold each grey tab back along its dotted line. 4. Curve the gores up one at a time and glue each tab under the edge of the next gore, the north first, then the south; the last tab closes the ball. The top of the sheet is north.

True scale

Io's mean radius is 1 821.5 km (registry/worlds.yaml). At 82 mm across the globe is 1 : 44.4 million: one millimetre here is 44 km there.
